Requirements/Specifications

- The process of collecting requirements for the drone software was to interact with farmers/landowners and discuss the types of problems they wished to be solved in their line of work

- Work Division: Noah-UI Design, Brady-Use Cases, Connor-Team Norms

- The process of turning requirements to specifications was to prioritize the most important requirements and define the scope of the software to create the correct specifications

- Work Division: Noah-Class/Sequence Diagram, Brady-State Diagram, Connor-Functional Modeling, All-Entity Modeling

Combined Use Case
